

macOS AnyConnect VPN Details & Instructions

Step by Step Installation Instructions

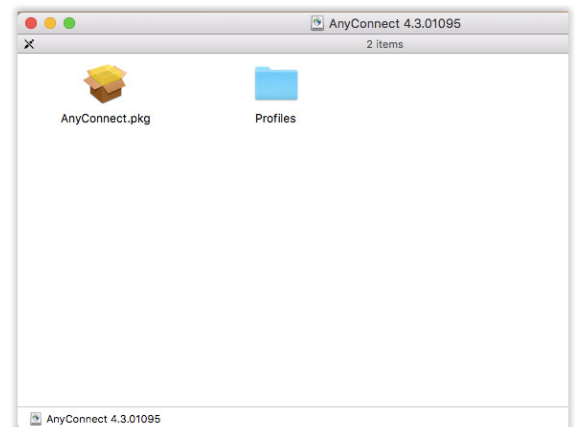

The screen shots that follow are what the user should see upon installing and connecting to VPN on a Mac. Some images may be slightly different on each system and OS version.

Step 1 – Download the AnyConnect installer.

Generally, the easiest method to accomplish this is to open the following address in a web browser and successfully login, <https://vpn.rutgers.edu>

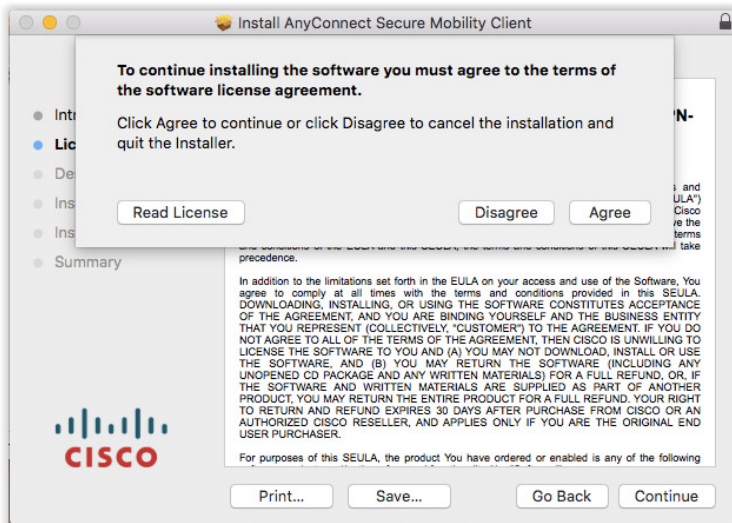

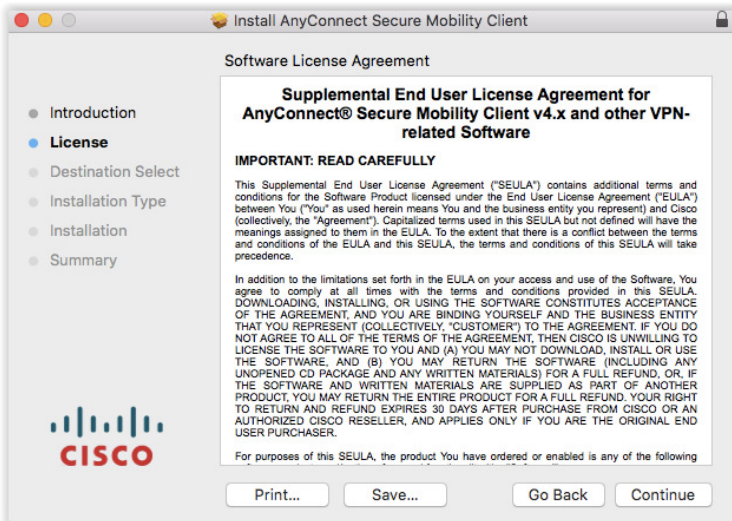

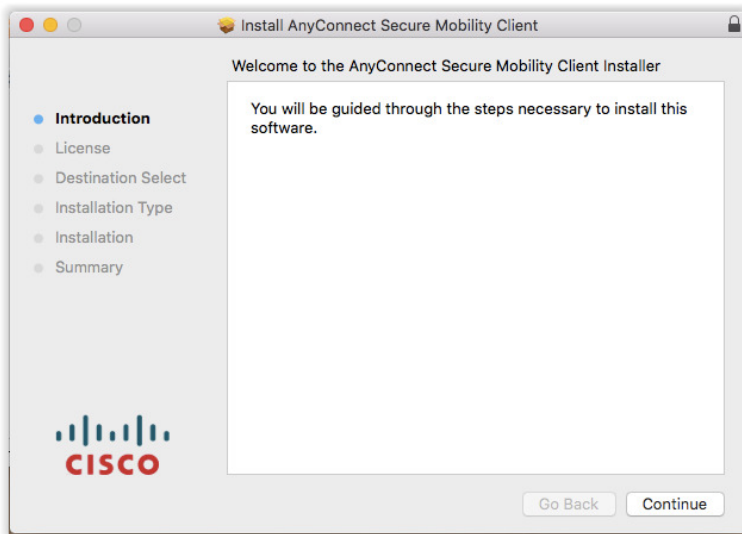

Once you've authenticated an automatic installation should begin. If it fails you should see the following where you can click "AnyConnect VPN" and you will be prompted to save the client.

Step 2 – In the Downloads folder, locate and run the AnyConnect Secure Mobility Client installation package.

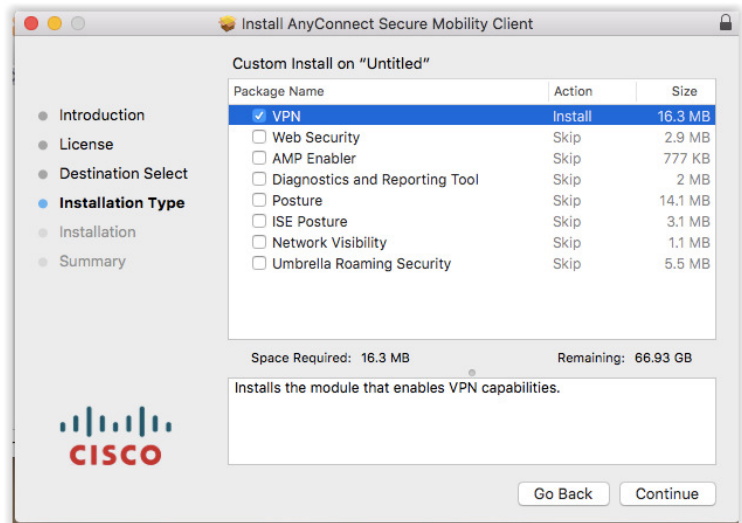

macOS AnyConnect VPN Details & Instructions

Step 3 – Install the software.

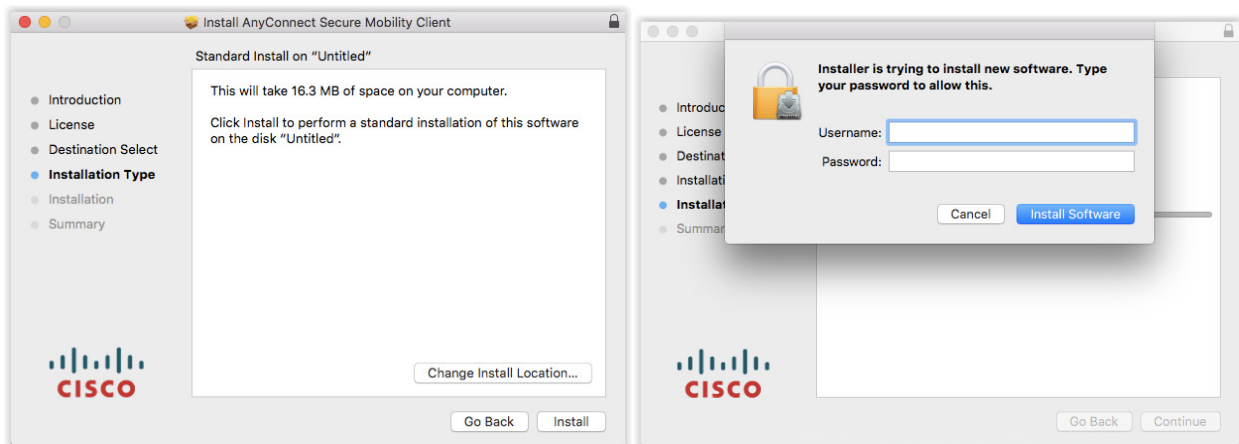

macOS AnyConnect VPN Details & Instructions

Step 4 – Deselect all options except for “VPN”

Step 5 – The installer requires elevated privileges to run. Enter your Mac credentials and click “Install Software”.

Step 6 – The Anyconnect Secure Mobility Client is now installed.
