

Linux OpenConnect Details & Instructions

Installation

Install the OpenConnect package from your distribution's repositories.

Usage

OpenConnect can be used with NetworkManager, or manually via the command line.

NetworkManager (Optional, but recommended)

Install the network-manger-openconnect package. After installation, restart your computer. Then configure and connect with your desktop environment's network settings. You will want to use vpn.rutgers.edu for the gateway. Save and connect. It will prompt you for a password twice. For the first prompt, enter your NetID password. For the second prompt enter one of the following four Duo actions.

1. Enter a 6 digit duo passcode
2. Type "push" to send a push
3. Type "phone" to call your device
4. Type "sms" to text new passcodes

Command Line

Simply run the following command:

```
openconnect vpn.rutgers.edu
```

It will prompt you for a password twice. For the first prompt, enter your NetID password. For the second prompt enter one of the following four Duo actions.

1. Enter a 6 digit duo passcode
2. Type "push" to send a push
3. Type "phone" to call your device
4. Type "sms" to text new passcodes
